TARUN MEENA

Full-Stack (MERN) & Backend Developer | Node.js · NestJS · Next.js · React · Python · FastAPI · TypeScript · MongoDB · AWS · Kubernetes · CI/CD

Bhopal, Madhya Pradesh, India | 8462989962 | meenatarun656@gmail.com | linkedin.com/in/tarun-meena-3521b224b

PROFESSIONAL SUMMARY

Full-Stack and Backend Developer with 3.9+ years of experience (nearing 4 years) building scalable REST APIs and web applications with the MERN stack (MongoDB, Express.js, React, Node.js), NestJS, Next.js, TypeScript, and Python (FastAPI). Delivers features end-to-end, from database design and API development to React user interfaces. Experienced in optimizing MongoDB at 300M+ record scale, deploying AWS serverless architecture (Lambda, S3, EC2, API Gateway), working with CI/CD pipelines and Kubernetes-based deployments, and integrating AI/LLM services (OpenAI, Anthropic) into production systems. Delivered production systems across AI/GenAI content platforms, e-commerce, healthcare, and media, cutting infrastructure costs up to 20% and improving API/query performance up to 60%.

TECHNICAL SKILLS

Languages	JavaScript (ES6+), TypeScript, Python
Frontend	React, Next.js, React Hooks, Redux, Context API, HTML5, CSS3, Tailwind CSS, Responsive Design
Backend (Node.js)	Node.js, Express.js, NestJS, Fastify, Hapi.js, RESTful API Design, Microservices, Swagger/OpenAPI
Backend (Python)	FastAPI, Flask, Django, Django REST Framework, Pydantic, SQLAlchemy, Celery
AI / LLM	OpenAI API, Anthropic API, RAG, Embeddings & Vector Search, Prompt Engineering, AI Pipeline Development
Databases	MongoDB, Mongoose, PostgreSQL, SQL, TypeORM, Redis, Medusa
Cloud / DevOps	AWS Lambda, S3, EC2, API Gateway, Serverless Architecture, Docker, Kubernetes, CI/CD Pipelines, Nginx
Auth & Security	JWT, RBAC, OAuth, Secure API Design
Testing	Jest, Pytest, Postman
Integrations	Stripe, Razorpay, Puppeteer, Cheerio, FCM
Tools	Git, GitHub, GitLab, Bitbucket

PROFESSIONAL EXPERIENCE

Backend Developer **Oct 2025 – Present**

Rootlex Technology Pvt. Ltd. | *Remote, India*

- Architected and maintained RESTful backend APIs for multiple client products (Lucidream, Hinch, Netros, TheSpice.AI, MaterialFlow) using Node.js, NestJS, TypeScript, Python, and AWS.
- Built React-based frontend components and interfaces to support internal tools and client-facing product features, working across the stack alongside backend API development.
- Built AI-driven content and order-processing pipelines integrating OpenAI/Anthropic LLM APIs, combining prompt engineering with backend workflow design for real-time, multi-platform systems.
- Implemented Python-based automation scripts and AI/LLM workflows to streamline content processing, data enrichment, and structured extraction from unstructured input.

Node.js Developer **Jul 2023 – Oct 2025**

Bigscal Technologies Pvt. Ltd. | *Surat, Gujarat, India*

- Cut MongoDB response time 40–60% across 300M+ records through strategic indexing and aggregation pipelines; built RBAC for S3 and MongoDB resources.
- Reduced AWS infrastructure costs by 20% by migrating scraping workloads to AWS Lambda serverless functions.
- Integrated payment gateways (Stripe, Razorpay) and third-party APIs, improving transaction reliability across client applications.
- Delivered multiple client-facing projects using TypeScript, Node.js, and MongoDB within Agile sprints.

Software Engineering Intern **Jan 2023 – Jun 2023**

Bigscal Technologies Pvt. Ltd. | *Surat, Gujarat, India*

- Improved REST API response time by 25% through server-side caching and MongoDB query optimization.

KEY PROJECTS

Hinch — E-Commerce Platform

Node.js, TypeScript, React, MongoDB, AWS

- Built backend APIs for a multi-brand e-commerce platform supporting 10,000+ SKUs across 200+ brands.
- Developed product catalogue, cart, order management, payment integration, and real-time delivery tracking workflows.

MaterialFlow — AI Order & Inventory Platform

Node.js, Python, TypeScript, React, AI/LLM, AWS

- Built an AI-assisted order extraction system that processes WhatsApp text, images, PDFs, and voice notes into structured catalogue/order data.
- Implemented Hinglish and trade-slang matching with confidence scoring to identify catalogue items accurately from unstructured input.
- Connected AI processing with real-time inventory, picking, packing, and dispatch workflows across Web, Android, and iOS.

Lucidream — AI Content Chief of Staff
AI/GenAI, LLMs, Python, Node.js, React, Content Automation

- Built backend and AI workflows that transform long-form podcast/video content into clips, captions, show notes, articles, and social-media content.
- Developed automated content-generation and processing workflows to convert unstructured media into publish-ready, brand-specific assets.
- Implemented an approval-first publishing workflow allowing users to review AI-generated content before it goes live on connected platforms.
- Built React components for the content review and approval interface used to preview and publish AI-generated assets.

Enterprise Knowledge Assistant — RAG Platform
Python, FastAPI, LLM APIs, Embeddings, Vector Database

- Designed a Retrieval-Augmented Generation (RAG) backend covering document ingestion, chunking, embeddings, vector retrieval, Top-K search, and re-ranking.
- Implemented semantic search combined with BM25 hybrid retrieval to handle natural-language questions and exact technical terms.
- Added prompt engineering, context management, structured output validation, and guardrails for reliable, grounded AI responses.

TheSpice.AI — AI-Powered Podcast Platform
Python, AWS Lambda, OpenAI, Anthropic

- Integrated OpenAI and Anthropic LLM APIs for automated podcast content generation, summarization, and tagging.
- Built Python-based audio/content processing workflows and REST APIs to automate podcast ingestion and downstream content generation.

Netros — Hospital Management System
Node.js, TypeScript, MongoDB, RBAC

- Developed backend services for patient records, appointment scheduling, billing, and hospital workflows.
- Implemented role-based access control for doctors, nurses, administrators, and other system users.

StorageDNA — Storage Backend
Node.js, MongoDB, AWS S3, RBAC

- Optimized MongoDB workloads across 300M+ records, cutting response time 40–60% through indexing and aggregation pipelines.
- Built RBAC for S3/MongoDB and a local S3-compatible server (s3rver) with multipart upload support.

Spiral Scraper — Spiralyze
Node.js, AWS Lambda, VWO, Optimizely, Convert, Google Optimize

- Migrated scraping workloads to AWS Lambda, cutting infrastructure costs by approximately 20%.
- Improved scraping efficiency 20% through parallel processing and job queuing; integrated VWO, Convert, Optimizely, and Google Optimize.

News Scraper
Node.js, Cron, MongoDB, Sentiment Analysis API

- Built scheduled news-scraping workflows using cron jobs, parallel processing, and job queues, improving accuracy and timeliness by ~50%.
- Integrated a sentiment analysis API to enrich scraped content and implemented role-based authentication.

EDUCATION

Master of Computer Application (MCA) — Rajiv Gandhi Proudyogiki Vishwavidyalaya (RGPV), Bhopal, India
May 2021 – Jun 2024
GPA: 8.93 / 10.0
